Table 1. RQ2 size-aware suite per project on GPT-5.6-terra, two projects per row. Each panel reports doc-model link F_1/F_2 and the component miss rate (CMR), then doc-code link, worst-component, and harmonic-component F_1/F_2 . *Average* is the five-project macro average, the level the prose quotes. ArchLinker and Artemis run on GPT-5.6-terra and are means of three runs; the SWATTR→TransArc pipeline is deterministic.
